LEAD FREE*

Series LF601, LF601S

Lead Free* Silent Check Valves

Sizes: 1/4"-1"

Series LF601, LF601S Lead Free* Silent Check Valves efficiently perform all of the functions of a swing check or vertical lift check valve and at the same time operate silently to prevent the effects of water hammer. The Series LF601 and LF601S silent check valves feature Lead Free* construction to comply with Lead Free* installation requirements.

Features

- EPDM disc
- Cast copper silicon alloy body for durability
- Integral Lead Free* copper silicon alloy seat
- nstall in horizontal or vertical position with upward flow
- Low pressure drop equivalent to a swing check
- Silent operation

Models

LF601 $\frac{1}{4}$ " - $\frac{1}{2}$ " threaded end connections LF601S $\frac{1}{2}$ " - 1" solder end connections*

Specification

A Lead Free* silent check valve shall be installed as indicated on the plans. The valve shall have a Viton® disc, integral Lead Free* copper silicon alloy seat and silent operation. Pressure rating no less than 250psi (17.2 bar) WOG non-shock. The silent check valve shall be constructed using Lead Free* cast copper silicon alloy body and check with Lead Free* brass adapter. Lead Free* silent check valves shall comply with state codes and standards, where applicable, requiring reduced lead content. Valve shall be a Watts Series LF601 (threaded) or LF601S (solder).

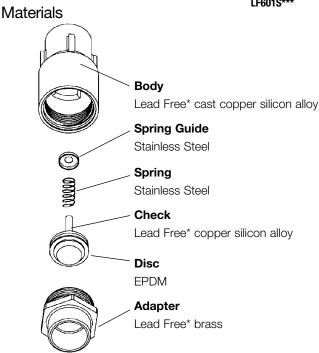

NOTICE

These valves are not suggested for installation in sewage ejector piping.

Do not use for reciprocating air compressor service.

LF601S***

***This valve is designed to be soft soldered into lines without disassembly using a low temperature solder; 420°F (216°C). Other solders such as 95/5 tin antimony 460°F (238°C) or 96/4 tin silver 430°F (221°C) can be used. However, extreme caution must be used to prevent seat damage. Higher temperature solders will damage the seat material. ANSI B16.18 states that the maximum operating pressure of 50-50 solder connections is 200 psi (13.8 bars) at 100°F (38°C), and decreases with higher temperatures. Apply heat with the flame directed AWAY from the center of the valve body. Excessive heat can harm the seats.

NOTICE

The information contained herein is not intended to replace the full product installation and safety information available or the experience of a trained product installer. You are required to thoroughly read all installation instructions and product safety information before beginning the installation of this product.

^{*}The wetted surface of this product contacted by consumable water contains less than 0.25% of lead by weight.

Pressure - Temperature

Maximum Working Pressure:

250psi (17.24 bar) WOG non-shock @ 100°F (38°C)
